

sleeper stones

gives the appearance of real timber railway sleepers

Sleeperstones have been developed using actual old weathered railway sleepers as a reference and pattern, the finished product being almost indistinguishable from its natural counterpart.

This versatile product gives the appearance of real timber but because it is made from reconstructed stone, it is more durable, will never rot and requires no maintenance. Can also be used in conjunction with other decorative paving to create interesting paved areas which combine different colours and surface textures.

Size mm (nominal)	No./sq metre
900 x 250 x 50	4.44

Various lengths of Sleeper stone planted vertically in the ground create an interesting border.

An effective use of sleeperstones to create simple flower bed borders and attractive promenades.

A simple combination of horizontal and vertical Sleeper stones can produce an effective pathway
